

| OVERVIEW |

The BoilerGuard is a low cost complete plant room safety system providing a central interface for all common safety systems such as fire alarms, thermal links and gas sensors. With the option to include gas pressure proving, this can also be used when flame failure devices are not fitted.

Any combination of sensors from the FGS range can be connection by simply wiring in parallel, cutting down on installation costs. The communication interface allows all sensor information to be displayed on the panel, this includes gas type, concentration, status, alarms and calibration data.

The relay outputs allow the unit to be connected to external systems or alarm beacons and the latching facility combined with the additional device interfaces offer the flexibility to cover any application.

| KEY FEATURES |

- Can connect with up to 16 Gas Sensors
- Clear LCD Indication
- Proving or Non-proving selectable
- Auto-reset following power failure
- Fire alarm test bypass timer
- 24VDC auxiliary power output to power 4-6 Flamefast Gas Sensors dependant on sensor type.
- External power supply required for additional. Additional Interfaces for:
 - Thermal Links, Ventilation Systems, Remote Emergency Stop Buttons and Fire Alarm Systems
- Sensor calibration reminder
- Alarm 1, Alarm 2 and Fault relays
- Selectable relay latching function
- 5 Year Warranty
- UK MANUFACTURED

BOILERGUARD PLANT ROOM SAFETY SYSTEM

Dimensions

Height	180mm
Width	180mm / 190mm including Hinge
Depth	60mm / 65mm including Stop Button

Technical Specification

Power Supply	
Power Consumption	
Outputs	

100 - 250VAC 50/60Hz 40W Max Gas Solenoid Sw Alarm 1 SPI Alarm 2 SPI Fault SPI IP65 CE, UKCA

Switched Mains SPDT - 5A @ 250V Max SPDT - 5A @ 250V Max SPDT - 5A @ 250V Max

External Device Interfaces

24V Out Pressure Trans Gas Sensor Ventilation Thermal Link Fire Alarm Remote Stop

IP Rating

Approval

Auxiliary Supply (300mA Max) for FGS Monitors Proving Transmitter BACnet Interface for Gas Sensor 24V Signal to monitor external VFC 24V Signal to monitor external VFC 24V Signal to monitor external VFC 24V Signal to monitor external VFC

Installer Selectable Options

- Proving or Non-proving
- Auto-reset
- Alarm 1 Latching
- Alarm 2 Latching

Basic Operation

The BoilerGuard has three buttons on the front:

Reset - The BoilerGuard Alarm 1 and 2 relays are activated depending on the sensor conditions. Following an alarm the reset button can be used to reset any relays that are set to latch including the Gas Valve output which will shut down if any sensor reaches Alarm 2.

Mute - If there are any gas alarms, this can be used to silence the panel for 15 minutes. If this is held in for 10 seconds, this will also reset any non-latching alarm relays for 2 minutes.

Test - The operation of the Test button is dependent on the panel status;

- If the panel is live without any alarm conditions, holding this button in for 10 seconds will enable the Fire Alarm bypass. The Fire Alarm interface will be ignored for 30 minutes to allow tests to be carried out.
- Following an alarm (prior to reset), holding the Test button for 5 seconds each will change the state of the Alarm 1, Alarm 2 and Fault relays.
